

Over the past few decades, a handful of scientists have been racing to explain a disturbing aspect of our universe: only four percent of it consists of the matter that makes up you, me, our books, and every star and planet. The rest is completely unknown. Richard Panek tells the dramatic story of the quest to find this dark matter and an even more bizarre substance called dark energy. This is perhaps the greatest mystery in all of science, and solving it will bring fame, funding, and certainly a Nobel Prize. Based on in-depth reporting and interviews with the major players -- from Berkeleys feisty, excitable Saul Perlmutter and Harvards witty but exacting Robert Kirshner -- to the doyenne of astronomy, Vera Rubin -- the book offers an intimate portrait of the bitter rivalries and fruitful collaborations, the eureka moments and blind alleys, that have fueled their search, redefined science, and reinvented the universe. The stakes couldnt be higher. Our view of the cosmos is profoundly wrong, and Copernicus was only the beginning: not just Earth, but all common matter is a marginal part of existence. Paneks fast-paced narrative, filled with original reporting and behind-the-scenes details, brings this epic story to life for the very first time.
